LIVE DEMO WALKTHROUGH · HINGLISH

AI Workforce

Aapke live demo instance ke actual data ke saath — screen-by-screen walkthrough

Yeh document generic feature-list nahi hai — isme wahi exact numbers, agents, calls, workflows, aur training insights explain kiye gaye hain jo abhi aapke demo mein maujood hain. Isko demo dene se pehle ek quick script ki tarah use karo, ya kisi naye team member ko app samjhane ke liye.

Dashboard | Agent Studio | Conversations | Workflows | AI Training Center

BETA v0.1 — sab numbers isi demo instance ke actual data se hain

Taiyaar kiya gaya: 26 Aug 2026
Live demo reference

01 — DASHBOARD

AI Workforce Overview

Dashboard ke har tile ka matlab, seedhe Hinglish mein — pichhle 14 din ka data.

ACTIVE CALLS

0

Abhi is second live chal rahi calls kitni hain. Real-time hai, screen har kuch second refresh hoti hai.

AI AGENTS RUNNING

0 / 2

Agent Studio mein total 2 AI employees banaye hue hain. Unme se 0 abhi kisi live call pe kaam kar rahe hain (dono idle hain).

COST SAVED

$120

`resolved_calls × $12/call`

Ek estimate hai, real accounting nahi. $12 ek assumption hai — agar wahi call ek insaan handle karta to roughly itna cost aata (industry benchmark). Yeh number backend mein ek constant hai, apna actual cost-per-call daal ke real bana sakte ho.

HUMAN TRANSFER RATE

15.4%

`escalated_calls ÷ completed_calls × 100`

Resolution rate ka "opposite pair" hai — jab AI khud resolve nahi kar paaya ya caller ne insaan maanga, tab escalate_to_human tool chala.

⭐ **SABSE IMPORTANT — YEH WAHI HAI JO POOCHA GAYA**

Resolution rate — 76.9%

resolved_calls ÷ completed_calls × 100

Matlab — jitni calls poori (complete) hui hain, unme se kitna % AI ne **akele** solve kar diya, bina kisi human agent ko beech mein laaye. 76.9% ka matlab: har 100 complete calls mein se ~77 calls AI ne khud resolve kar di. Yeh sabse important "kya AI kaam kar raha hai ya nahi" wala number hai — jitna zyada, utna accha.

Note: 76.9% + 15.4% (human transfer rate) = 100% nahi hoga zaroori nahi — kuch calls "abandoned" bhi ho sakti hain, jo teesri category hai.

TOTAL CALLS

13

Ab tak (all-time) database mein kitni total calls record hui hain — status kuch bhi ho (in-progress, completed, failed).

APPOINTMENTS BOOKED

0

Call ke dauraan AI ne `schedule_appointment` tool use karke kitni appointments/callbacks book ki hain.

AVG HANDLE TIME

61.7 min

`mean(ended_at - started_at)`

Completed calls ka average duration. Same metric jo human agents ke liye bhi track karte — AI vs human performance compare karne ke liye. (61.7 min ek call ke liye lamba hai — demo/sample data ki wajah se ho sakta hai.)

CALL VOLUME CHART

14 din

Pichhle 14 din, har din kitni calls aayin — bar/line pe hover karo to exact count dikh jaata hai.

02 — AGENT STUDIO

AI employees banao aur manage karo

Agent Studio ke dono screens ka pura breakdown — list view aur detail view.

PEHLI SCREEN — AGENT LIST

Search bar ("Search agents by name or persona...")

Naam ya persona text se agents ko filter karne ke liye — jaise abhi 2 hi hain to zyada zaroori nahi, lekin 20-30 agents ho jaayein to kaam aayega.

Agent card — "swara" DEFAULT

Yeh wo AI employee hai jo **abhi main inbound line pe calls uthata hai** — DEFAULT badge iska matlab hai. Voice hai **en-US-JennyNeural** (English US, Jenny wali awaaz). Persona text sirf **tone/style** decide karta hai (kaise baat karta hai), koi fact nahi deta — facts sirf do jagah se aate hain: uploaded documents (RAG) ya PBM tool lookups (jaise formulary, claim status).

Duplicate button — isi agent ka poora config (persona, voice, department) copy karke naya agent bana deta hai. **Delete** button — permanently agent hata deta hai (confirmation dialog aayega pehle).

Dusra "swara" card (bina DEFAULT badge)

Yeh lagta hai pehle wale ka duplicate hai — same persona/voice hai lekin default nahi hai. Isko rename/edit karke alag department ka agent bana sakte ho (jaise sirf pharmacy queue ke liye).

"Create AI employee" form (niche)

Name — naye agent ka naam (jaise "Claims Assistant"). **Voice dropdown + Preview button** — voice choose karo, "Preview" dabao to browser hi us voice mein bol ke sunayega (yeh sirf approximate hai, real call voice thoda alag lag sakta hai). Submit karne se naya AI employee ban jaata hai.

DOOSRI SCREEN — AGENT DETAIL (SWARA KO CLICK KARNE PE KHULTA HAI)

Left side — Edit form

Name — agent ka naam edit karo. **Voice + Preview** — voice change karke sun sakte ho. **Persona** (textarea) — sirf personality/tone define karo (polite, empathetic, formal) — **facts mat likho**, wo yahan se nahi aate.

Right side — Knowledge base panel

Drag & drop zone ya "Browse files" (blue button) se PDF/DOCX upload karo. Backend usko **chunks** mein todta hai aur embed karta hai (RAG ke liye) — taaki call ke dauraan `search_documents` tool isko dhoondh ke citation ke saath jawab de sake.

Department dropdown

Abhi "general" set hai. "general" seedha calls uthata hai aur callers ko unke intent ke hisaab se specialist agents ki taraf route kar deta hai. "pharmacy" ya "claims" set karne pe agent us specific queue ke liye specialize ho jaata hai.

pharmacy_benefits_faq.pdf — 3 chunks

Yeh already uploaded document hai, "3 chunks" batata hai file kitne pieces mein index hui hai. **Delete** (red button) — document aur uske saare indexed chunks ko hata deta hai — matlab ab AI usme se answer nahi de payega.

Save changes button

Jo bhi edit kiya (name/voice/persona/department), usko permanently save kar deta hai.

Short mein: Left side se aap agent ki personality control karte ho, right side se aap uski knowledge (kya-kya use karke jawab de sakta hai) control karte ho.

03 — CONVERSATIONS

Calls & Appointments

Poora breakdown — left side call list aur right side call-detail drawer, ek real call ke example ke saath.

LEFT SIDE — CALL LIST

Live Calls / Appointments tabs

Do views hain — "Live Calls" mein saari calls (past + ongoing) ka log dikhta hai, "Appointments" mein `schedule_appointment` tool se book hui appointments dikhengi.

Filters (Status / Agent / From date / To date)

Calls ko narrow down karne ke liye — jaise sirf "escalated" calls dekhni hain, ya sirf "swara" agent ki calls, ya kisi specific date range ki.

Table columns — FROM / TO / AGENT / INTENT

FROM / TO — caller ka number aur jis number pe call aayi. **AGENT** — kis AI employee ne call handle ki ("—" matlab koi specific agent assign nahi hua). **INTENT** — AI ne call khatam hone ke baad khud detect kiya ki caller kis wajah se call kiya tha (LLM-generated summary jaisa). Row pe click karoge to right side "Call detail" drawer khulta hai.

RIGHT SIDE — CALL DETAIL DRAWER (EXAMPLE: OZEMPIC COVERAGE CALL)

Status: COMPLETED

Call technically khatam ho chuki hai (in-progress/failed nahi hai).

Agent: swara

Isi AI employee ne yeh call handle ki thi.

Started / Ended / Duration: 1m 26s

Call kab shuru hui, kab khatam hui, aur Ended minus Started se total call ka time.

Resolution: RESOLVED

Yeh procedural flag hai — call ke dauraan koi human involve nahi hua, AI ne khud hi solve kar diya. (Iske alawa "escalated" ya "abandoned" bhi ho sakta hai.)

Intent

"Customer called to inquire if Ozempic is covered and if it requires prior authorization, and to find an in-network pharmacy near zip code 110001." — yeh AI ne call ke baad generate kiya hai.

Sentiment: neutral · AI confidence: 95%

Sentiment poori call ka overall mood hai (positive/neutral/negative/frustrated). AI confidence batata hai AI apne jawabon pe kitna sure tha (0-100%) — 95% matlab kaafi confident, koi guesswork nahi.

Call SID

Twilio ka unique identifier us call ke liye (`CA15258ee83a232660cde70fff4519bb0b`) — technical/debugging ke liye, Twilio dashboard mein cross-check karna ho to.

Aage aur bhi hai: isi drawer ko neeche scroll karoge to **Summary**, **Quality score card** (accuracy/compliance/empathy/resolution), aur **full transcript + Download .txt button** bhi milega.

04 — WORKFLOWS

AI ke liye fixed procedures

"Step-by-step procedures the AI follows exactly when a caller's request matches the trigger" — matlab yeh page un cheezon ke liye hai jahan AI ko improvise nahi karna, ek fixed sequence follow karna hai.

EXISTING WORKFLOW CARD — "PHARMACY CHANGE REQUEST"

PHARMACY ACTIVE

Pharmacy Change Request

When: Caller wants to switch to a different pharmacy · 1 step(s)

PHARMACY badge

Yeh workflow sirf **pharmacy department** ke agents pe apply hoga, saare agents pe nahi.

ACTIVE badge (green)

Abhi yeh workflow on hai, live calls mein use ho raha hai. Agar inactive hota to grey/neutral badge dikhta.

"When: Caller wants to switch to a different pharmacy"

Yeh trigger description hai. Jab bhi caller ka intent isse match kare, AI is workflow ko checklist ki tarah follow karega.

"1 step(s)"

Abhi is workflow mein sirf 1 tool-call step hai (workflow ko click karoge to detail page khulega jahan steps add/edit/reorder kar sakte ho — jaise "pehle verify_member karo, phir find_pharmacy").

Deactivate / Delete buttons

Deactivate — workflow ko band kar deta hai bina delete kiye, taaki baad mein wapas on kar sako. **Delete** (red) — workflow ko permanently hata deta hai (confirmation aayega).

"CREATE WORKFLOW" FORM (NAYA WORKFLOW BANANE KE LIYE)

Name / Trigger / Department

Name — workflow ka naam (jaise "Pharmacy Change Workflow"). **Trigger** — plain English mein likho ki yeh workflow kab chalna chahiye (jaise "Caller wants to change their pharmacy") — AI iska matlab samajh ke caller ke intent se match karta hai. **Department** — "All departments" ya specific department (pharmacy/claims/etc.) choose karo.

Create button

Form submit karke naya workflow ban jaata hai (iske baad usme steps add karne ke liye detail page pe jaana padega, jahan "+ Add step" se tools chain kar sakte ho, condition likh sakte ho jaise "only if member is verified", aur ↑/↓ se order badal sakte ho).

Short mein: Workflows woh jagah hai jahan aap LLM ki flexibility ko limit karke, compliance-critical steps ko fixed order mein force karte ho — jaise "member verify kiye bina pharmacy detail mat do".

05 — AI TRAINING CENTER

Self-improvement loop

"Patterns across low-confidence answers, escalations, and low quality-review scores" — matlab yeh page manually har transcript padhne ki jagah, patterns khud dhoond ke deta hai ki AI kahan struggle kar raha hai.

Run analysis button (top-right, blue)

Isko click karne pe ek fresh scan chalta hai — recent calls mein se low-confidence answers, escalated calls, aur low QA-score wali calls ko LLM padh ke unme se common patterns nikalta hai (insights banata hai). Har baar naya data aane pe dobara chala sakte ho.

Tabs — All / New / Acknowledged / Dismissed

Insights ko unke review-status ke hisaab se filter karne ke liye. Ek naya insight "New" hota hai, jab tak koi supervisor usko review na kare.

EXAMPLE INSIGHT CARDS (ABHI JO SCREEN PE HAIN)

MISSING KNOWLEDGE NEW

Upload detailed prior authorization and claim status information

Several escalated calls involve inquiries about prior authorization processes and claim statuses that the AI could not resolve, indicating a gap in accessible knowledge about these topics.

1 supporting example(s) · Aug 25, 2026, 11:23:32 PM

MISSING KNOWLEDGE (blue badge) — is insight ki category batati hai: AI ke paas is topic pe knowledge base mein enough documents nahi hain. **NEW** (orange badge) — abhi tak koi supervisor ne isko review nahi kiya. "1 supporting example(s)" — kitni actual calls isko justify kar rahi hain. **Acknowledge** button — supervisor keh raha hai "haan yeh valid hai, main isko fix karunga" (jaise Agent Studio mein jaake PA-related document upload karna). **Dismiss** button — "yeh relevant nahi hai / ignore karo".

PROMPT IMPROVEMENT ACKNOWLEDGED

Enhance empathy and communication during identity verification

Multiple calls show the AI correctly follows compliance by refusing or requesting identity verification but lacks empathetic language and fails to complete verification or provide information, leading to unresolved issues.

2 supporting example(s) · Aug 25, 2026, 11:23:32 PM

PROMPT IMPROVEMENT (orange badge) — is category ka matlab: AI ki knowledge sahi hai, lekin uska persona/prompt (tone/style) improve karne ki zaroorat hai. **ACKNOWLEDGED** (green badge) — yeh insight already accept ho chuki hai, isliye ab Acknowledge button gayab hai — sirf Dismiss bacha hai (kyunki accept karne ke baad usko wapas "un-acknowledge" karne ka option nahi hai). Description bata raha hai AI compliance to sahi follow kar raha hai, lekin uska tareeka rukha/empathy-less hai.

MISSING KNOWLEDGE DISMISSED

Add employee background information for common inquiries

Kisi ne review karke "not relevant" mark kar diya hai, isliye grey/dismissed dikh raha hai.

Short mein: Yeh AI ka self-improvement loop hai — "AI galat/weak kahan hai" se seedha "yahan yeh document upload karo" ya "persona mein empathy add karo" tak le jaata hai, bina sau transcripts manually padhe.
